## OUR SEED DEPARTMENT

Under this department, we offer on the following pages the varieties of vegetables and flower seed that have proven, after careful study of their every quality, to be the most suitable in their respective classes.

As soon as the seed is ready for shipping, whether of our own production or received from our contract growers, a sample is immediately taken and soil tests made for germination in our own greenhouses under careful supervision.

It is gratifying to note the continued steady and rapid growth of our Seed Business; proving that our customers appreciate the method we employ. "We do not compete in low prices. Our aim is Quality."

If you grow for profit, or plant in large quantities, send your printed letter-head with your order and your goods will be invoiced at the Market Gardeners' wholesale rate.

# LAWN GRASS SEED

**One of our Specialties, and here's where we are strong**

Our practical experience and careful study of the various grasses enables us to produce such mixtures as, for their specific purposes, are giving the best satisfaction. We use in our mixtures of Lawn Grasses absolutely none but the very best of clean high grade grass seed. Our "Rex", "Shady Corner" and other mixtures will give you the results you are looking for.

It is but a comparatively short time ago that we first put our Rex Mixture Lawn Grass Seed on the market, and it has already gained a most enviable reputation. Each season brings a greatly increased demand for this, a now standard high quality Lawn Grass Seed.

## Quantity to Use

The following quantities will be practical on most lawn mixtures. For new lawns, use 1 lb. to each 300 sq. ft., 5 lbs. to 1500 sq. ft., 135 to 145 lbs. per acre. For replenishing old lawns we recommend about one-half this quantity of seed.

**BRAINARD'S REX MIXTURE.** This is our very best mixture for general use and is actually a blend of a number of high grade grasses most suitable to withstand the close cutting, extremes of weather and other adverse conditions ordinary lawns have to endure. It contains, in correct proportions, such very important grasses as Kentucky Blue Grass, Bent Grass, Fancy Red Top and Rough Stalk Meadow Grass and is sold in bulk by weight as follows: 1 lb. 45c.; 2 lbs. 85c.; 3 lbs. \$1.25; 6 lbs. \$2.40; 12½ lbs. \$4.50; 25 lbs. \$8.50, Postpaid. Not prepaid, 50 lbs. \$16.00; 100 lbs. \$32.00.

## BRAINARD'S VERIGOOD MIXTURE.

This is a mixture of good, servicable lawn grasses, and while not quite equal in velvety texture to our Rex Mixture, is less expensive and answers well where a high quality, fine bladed grass is not really necessary. 1 lb. 35c.; 2 lbs. 70c.; 3 lbs. \$1.00; 6 lbs. \$1.85; 12½ lbs. \$3.50; 25 lbs. \$6.50, Postpaid. Not prepaid, 50 lbs. \$12.00; 100 lbs. \$24.00.

**BRAINARD'S SHADY CORNER.** This mixture is composed of dwarf growing, strong rooting grasses which thrive more or less in sheltered or shaded locations, and will make a quick showing though gradually build a strong green turf. 1 lb. 45c.; 2 lbs. 85c.; 3 lbs. \$1.25; 6 lbs. \$2.40; 12½ lbs. \$4.50; 25 lbs. \$8.50, Postpaid. Frames Where Nearly 40,000 Pot Grown Hardy Plants are Ready for Sale, Spring, 1934

Many varieties of Herbaceous plants such as Pæonias, Iris, Spireas, etc. are necessarily handled in field grown plants but in most all of the finer rooted varieties, we much prefer a well established pot grown plant, in preference to field grown divisions so often used by many firms. We have grown for this season's sales many thousands of pot grown plants, which are in splendid condition for Spring sale. Our list is made up of only commendable varieties and our stock is fine.

## ROCK GARDEN PLANTS

Among the most interesting and fascinating lines of gardening to which the public seem to be devoting more than usual attention are the Rock and Alpine Gardens. These are comparatively easily built and maintained and can be developed to a wonderful state of perfection within a small space, in fact fine Rockeries can be made in the smallest of gardens, as we might say using odd corners really useful for nothing else. However, extensive Rock Gardens are wonderful and desirable when space permits.

Following varieties are suitable for Rock Gardens and are described and priced among "Hardy Plants" on the following pages.

## EVERGREENS

Of all classes of plants difficult to comprehensively describe, in the brief space permitted, it is Evergreens. Descriptions are necessarily so brief that neither do they do justice to the beauty and value of many varieties nor are they of any advantage to most buyers.

There are distinct classes of Evergreens, those suitable for foundation planting, others for screening effects and windbreaks and other sorts for individual specimens. It is usually of greater interest to the customer what will look best and develop properly in some particular location, and it is in this selection that a Nurseryman's advice could be of value. Thus, we strongly recommend visiting the Nursery and selecting, from the suitable sorts, the varieties as they appeal to the buyer. Should it not be convenient, however, to visit the Nursery, do not hesitate to write or telephone us, explaining the situation and effects desired, and to such inquiries we will always give our most careful consideration.

We list, as follows, the choicest varieties suitable for this locality and grades, as listed, call for well developed, sheared or cut-back plants which have been several times transplanted. We also have larger or specimen plants in many varieties,

## PEAT MOSS

### Horticultural Grade or Granulated

A thoroughly decayed, natural material serving as a valuable medium for contributing to the formation of humus, and valuable for all types of soils. It has no disagreeable odors, is free from weed seed, inexpensive and can be obtained promptly in any desired quantities. Used on sandy soils to add fibre and make more moisture retaining properties, and on heavy or clayey soils its action is to make a more friable and better drainage condition. Soils rich in humus always make the best use of available fertilizers and when Peat Moss is used liberally often a less amount of fertilizer is necessary, as by the retaining of proper moisture content in the soil the fertilizers are more promptly available and retained so that roots can feed on it as needed. Peat Moss is also a wonderful preventative of soil leeching.

Aside from the value as set forth above, we know of no material which has recently come on the market so useful and serves so many diversified, important purposes as does Peat Moss. It is a wonderful mulching material, and excellent for packing bulbs and tubers for either temporary or winter storage. Fruit packed in this material will ripen and keep well, and vegetables will retain their firmness and last well packed in Peat Mull. 1 peck 20c.,  $\frac{1}{2}$  bu. 35c., 1 bu. 50c.,  $\frac{1}{4}$  bale sack \$1.00, 2- $\frac{1}{4}$  bale sacks \$1.75.
